

# Aggregation Warnings in REAL Warehouse

[Database: Project REAL]

## Measure Group / Aggregation Design / Aggregation

### DC Inventory

#### DC Inventory

##### Interactive ALL-ALL-ALL DC Inventory

This measure group contains only semi-additive measures. This aggregation will not be used when semi-additive measure values are retrieved because it does not include the granularity attribute of the semi-additive dimension ([Time].[Day]). (The Exists-with-a-measure-group function can still run off this aggregation, though.)

##### Interactive month DC Inventory

This measure group contains only semi-additive measures. This aggregation will not be used when semi-additive measure values are retrieved because it does not include the granularity attribute of the semi-additive dimension ([Time].[Day]). (The Exists-with-a-measure-group function can still run off this aggregation, though.)

##### Interactive month subject DC Inventory

This measure group contains only semi-additive measures. This aggregation will not be used when semi-additive measure values are retrieved because it does not include the granularity attribute of the semi-additive dimension ([Time].[Day]). (The Exists-with-a-measure-group function can still run off this aggregation, though.)

##### Query 8 DC Inventory

This measure group contains only semi-additive measures. This aggregation will not be used when semi-additive measure values are retrieved because it does not include the granularity attribute of the semi-additive dimension ([Time].[Day]). (The Exists-with-a-measure-group function can still run off this aggregation, though.)

### Store Inventory

#### Store Inventory

##### Query 17 Store Inventory

This aggregation contains redundant attributes which unnecessarily bloat the size of the aggregation.

##### Query 18 Store Inventory

This aggregation contains redundant attributes which unnecessarily bloat the size of the aggregation.

### Store Sales

#### Store Sales

##### Query 17 Store Sales

This aggregation contains redundant attributes which unnecessarily bloat the size of the aggregation.

##### Query 18 Store Sales

This aggregation contains redundant attributes which unnecessarily bloat the size of the aggregation.

##### Query 20 Store Sales

This aggregation contains redundant attributes which unnecessarily bloat the size of the aggregation.
